PROFILE SUMMARY

I am a motivated Cloud & DevOps Engineer with expertise in AWS, Azure, GCP, Terraform, Docker, Kubernetes, and CI/CD. I excel at building scalable cloud architectures, developing serverless applications, and automating deployments while creating robust monitoring systems to ensure operational efficiency. My commitment to continuous learning and improvement drives me to deliver innovative solutions in cloud computing and DevOps

TECHNICAL SKILLS

- **Cloud Platforms**
AWS(Primary): EC2, VPC, S3, IAM, CloudFront, Load Balancer, Auto Scaling, Transit Gateway, WAF, AWS GuardDuty, AWS CloudWatch, RDS, Lambda, Route53, EKS, AWS Glue
Azure: Virtual Machines, Virtual Networks, NSG, VMSS, Azure Storage, Azure Active Directory, Azure App Service
GCP: Compute Engine, Virtual Private Cloud, Cloud SQL(MySQL), IAM, Cloud Load balancing, GKE
- **Devops Tools:** Terraform, OpenTofu, Jenkins, Gitlab CI/CD, GitHub Action, Argo CD, Ansible, SonarQube, Maven
- **Containers:** Docker, Docker Compose, Dockerfile
- **Orchestration:** Kubernetes (EKS, ECS), Pods, clusters and master nodes, Service, Deployment strategy, Kubernetes Schedules, Helm Chart
- **Monitoring:** Grafana, Prometheus, Node Exporter, Loki
- **Version Control:** Git, GitHub, GitLab
- **Language:** Python (basic)
- **Operating System:** Linux

EXPERIENCE DETAILS

Devops Intern

Naresh I Technology, Hyderabad

Dec-25-present

Roles & Responsibilities:

- Designed and provisioned scalable AWS infrastructure using Terraform, reducing manual deployment errors.
- Developed reusable Terraform modules for VPC, EC2, RDS, EKS, Security Groups, Load Balancers, and Auto Scaling.
- Built CI/CD pipelines with GitHub to automate Docker image build and push to Amazon ECR.
- Containerized applications using Docker and deployed them on Kubernetes using YAML manifests.
- Implemented GitOps-based deployments using Argo CD with auto-sync and self-healing
- Integrated Prometheus and Grafana for Kubernetes monitoring and performance visualization.
- Automated log management and EBS snapshot creation using AWS Lambda, CloudWatch, and Event Bridge.

- Secured application traffic using AWS WAF and exposed services via Application Load Balancer and Route 53

PROJECTS

Automated Infrastructure Monitoring using Ansible, Prometheus, and Grafana

- Implemented automated server configuration using Ansible.
- Configured Prometheus for real-time metrics collection and alerting.
- Designed Grafana dashboards for centralized visualization and proactive incident response.
- Improved system visibility and monitoring efficiency across multiple environments.

Multi-Environment Cloud Infrastructure Management using Terraform

- Designed a modular Terraform architecture with environment-specific configurations and workspaces.
- Enabled secure environment isolation and controlled deployments across development, staging, and production.
- Applied Infrastructure as Code (IaC) best practices to ensure consistency, reusability, and maintainability.

Database Migration from EC2 to Amazon RDS

- Planned and executed migration from a self-managed database on EC2 to Amazon RDS.
- Minimized downtime and ensured data integrity during migration.
- Improved database availability, security, scalability, and operational efficiency using managed services.

EDUCATION

GIFT AUTONOMOUS COLLEGE, BBSR

Master in Computer Application

CGPA: **8.13**

Bhubaneswar, Odisha

2023-25

F.M. UNIVERSITY, BALASORE

B.Sc. in Physics

CGPA: **8.00**

Balasore, Odisha

2020-23

NILGIR HIGH SCHOOL, NILGIRI

Percentage: **66.5 %**

Balasore, Odisha

2018-20

CERTIFICATIONS

Certificate from OCAC, Bhubaneswar

Got Certificate form OCAC, Bhubaneswar for completing the internship Python

NPTEL Certification in Cloud Computing and IoT 4.0

Earned an NPTEL Certification in Cloud Computing and IoT 4.0 with a silver grade
